Introducing Digital Demand

The data collected from the D2 - Digital Demand © tool provides an understanding of the international demand for a specific country, region, or city. This information is obtained from analyzing the specific keywords that global citizens use on the most popular search engines worldwide.

According to the ideology presented by D2 - Analytics, when someone searches for information about a country, region, or city, the search engine is one of the primary resources used today. Researchers, travelers, investors, professionals, and other groups use search engine results to inform their decisions on the next steps in these areas.

Prior to analyzing the data in the D2 – Digital Demand © software, please consider that the nature of the results is mainly focused on the total searches performed online by global citizens.
